# About

Scripts included in this project will allow you to create [epub](#) version of the [Artificial Intelligence - foundations of computational agents](#) website.

# Requirements

This script was tested under [Linux Mint](#) 17, which is based on Ubuntu 14.04.

To run this script, you will need to install `calibre` package from you repositories. It will also require `pyhtmlparser` and `httpkie` python packages, which can be installed using `pip` command.

To install all required packages, run:

```
sudo apt-get install calibre python-pip
```

and:

```
sudo pip install pyhtmlparser httpkie
```

You can also run the `create_book.sh` script and install all packages interactively.

# How to

To create the epub file, open project directory in your terminal and run:

```
./create_book.sh
```

This command will download all informations from book's website and create epub version. This may take a while, depending

on speed of your internet connection.

### Note

This repository doesn't contain any content published at the book's website. Book is published under [Creative Commons Attribution-Noncommercial-No Derivative Works 2.5 Canada License](#), which allows you to *"Share — copy and redistribute the material in any medium or format"*, which is exactly what this convertor does.

### Note 2

ISBN is from .pdf version of the book, which you can find if you gonna try hard enough. It is probably wrong, but better than nothing.
