

## Converters

Automatically convert models from popular machine learning libraries such as Keras, Caffe, scikit-learn, LibSVM, and XGboost to the Core ML format.

<code>caffe.convert</code>	Convert a Caffe model to Core ML format.
<code>keras.convert</code>	Convert a Keras model to Core ML format.
<code>libsvm.convert</code>	Convert a LIBSVM model to Core ML format.
<code>sklearn.convert</code>	Convert scikit-learn pipeline, classifier, or regressor to Core ML format.
<code>xgboost.convert</code>	Convert a trained XGBoost model to Core ML format.
